Real Time Desktop Conferencing

Resolve Collaboration Services Corp.'s Web Conferencing application provides state-of-the-art PowerPoint, document, application and desktop sharing, remote control, and multiparty audio and video conferencing. From quick web meetings to full-featured conferences with multiple presenters, Resolve makes it fast, easy and affordable.

High-Quality Multiparty Video

Resolve offers true multiparty internet video conferencing as a standard feature, not an add-on. Viewers see smooth, clear, crisp video.

High-Quality Multiparty Audio

Like its video counterpart above, Resolve includes multiparty audio (VoIP) conferencing as a standard feature. You can enable/disable audio conferencing and easily switch from low-bandwidth, cell phone-like sound to studio quality audio all at the click of a mouse.

Real-Time PowerPoint Sharing: No Pre-Meeting Uploads Required!

You don't need to pre-process or stage your PowerPoint presentations before your meetings. Resolve lets you share any PowerPoint anytime. Your presentation is processed on-the-fly.

Record & Playback

It's easy to record your conference. Just select the Conference pull-down menu and select Record. You can record a session for somebody who cannot attend, and select any number of industry standard file formats.

Call today to request your FREE 30-day trial.
